Transport

Practical

New MASTER's capacities have never been better! The basic model is already very spacious and the Accessories range allows you to significantly increase its loading and carrying capacity. For example a roof rack which is well-adapted to New MASTER. Offered in aluminium or steel (depending on the length of the vehicle), it safely allows for up to 150 kg of extra load. Robust, treated to resist rust, and tested for aerodynamics, it includes a deflector which markedly reduces wind noise. The ladder attached to the rear door gives easy, risk-free access to the roof rack or roof bars. And if you still don't have enough space, think about the various towing systems – removable or fixed – so you can easily connect your trailer. Also customise the inside of your New MASTER with Sortimo racking options, personalised to you!

1. Roof rack with walkway and ladder
