# R-LINK Evolution

Software installation guide

This update only applies to Renault vehicles equipped with R-LINK and R-LINK Evolution whose **Vehicle Information Numbers have been verified on the website**. Use this software only with **your own Renault vehicle**. Do not install it in another car. Let the SD card present in the vehicle in its slot during the whole procedure.

How to perform updates

Vérifier si mon véhicule est
Check if there are any updates for your vehicle
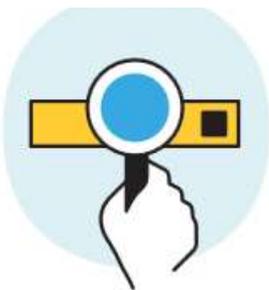

Télécharger cette mise à jour
Download this update on a USB stick

Brancher cette clé USB à mon
Plug this USB stick into your connected system

You can find this number on your Renault vehicle or on **your car registration certificate in section E**. This number is <u>required</u> in order to check that the update is compatible with your Renault vehicle. The number starts with VF and has 17 characters without "i" or "o".
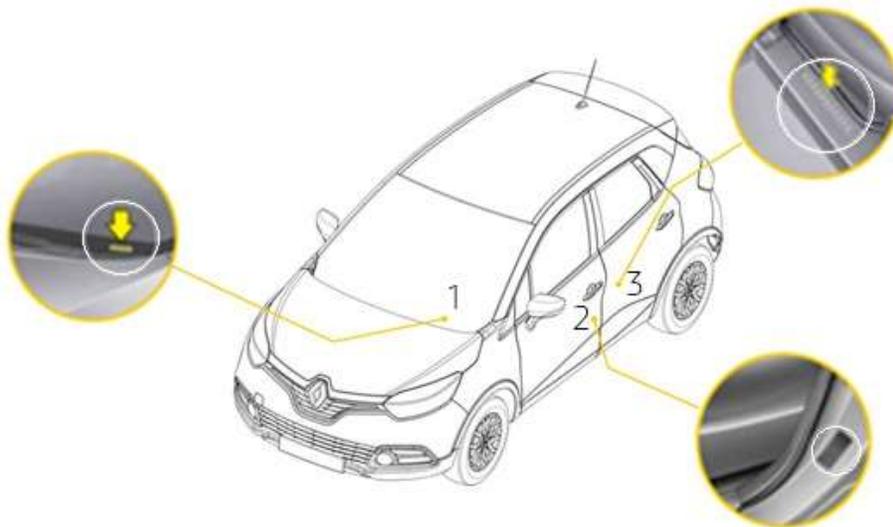

Prerequisite B: Use a USB stick in FAT32 format (8-32 GB)

Let the SD card present in the vehicle in its slot during the whole procedure.

To check whether your USB stick is in FAT32 format, go to the Properties tab (e.g. right click if using a PC)
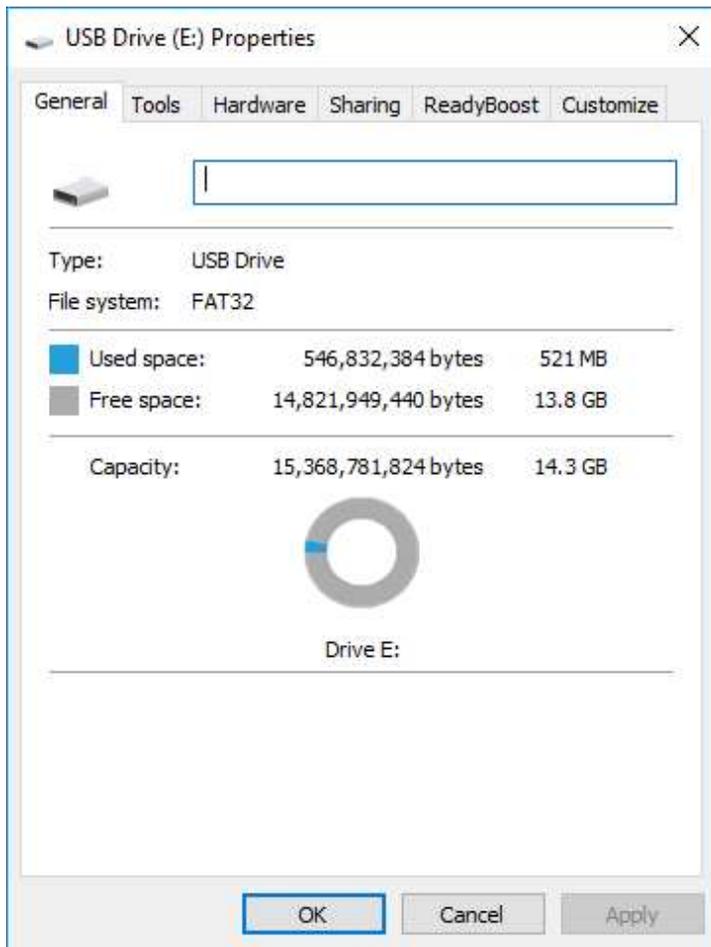

The USB stick must be empty. If this is not the case, delete everything on the USB stick.

Prerequisite C: Have a decompression software

To unzip the download file, we recommend using 7-Zip (you can download this from **http://7zip.fr/**). Don't forget to check that you have an active Internet connection throughout the entire procedure.
And most importantly, **do not interrupt a download in progress.**

easyconnect.renault.com

Step 1: Download the software update

Download the update: version
11.344.3064886-8056

[⤓ Download the update]

Use the software only on this specific Renault car. Do not install it on another car.

Example screen The version number is indicated at the time of the download.

Step 2: Unzip the file

Unzip with 7-Zip using the "Extract" command.

22% complete

Copying 1 item from USB Drive (E:) to USB Drive (E:)

22% complete

Speed: 26.3 MB/s

Name: TOMTOM.000
Time remaining: About 10 seconds
Items remaining: 1 (352 MB)

Fewer details
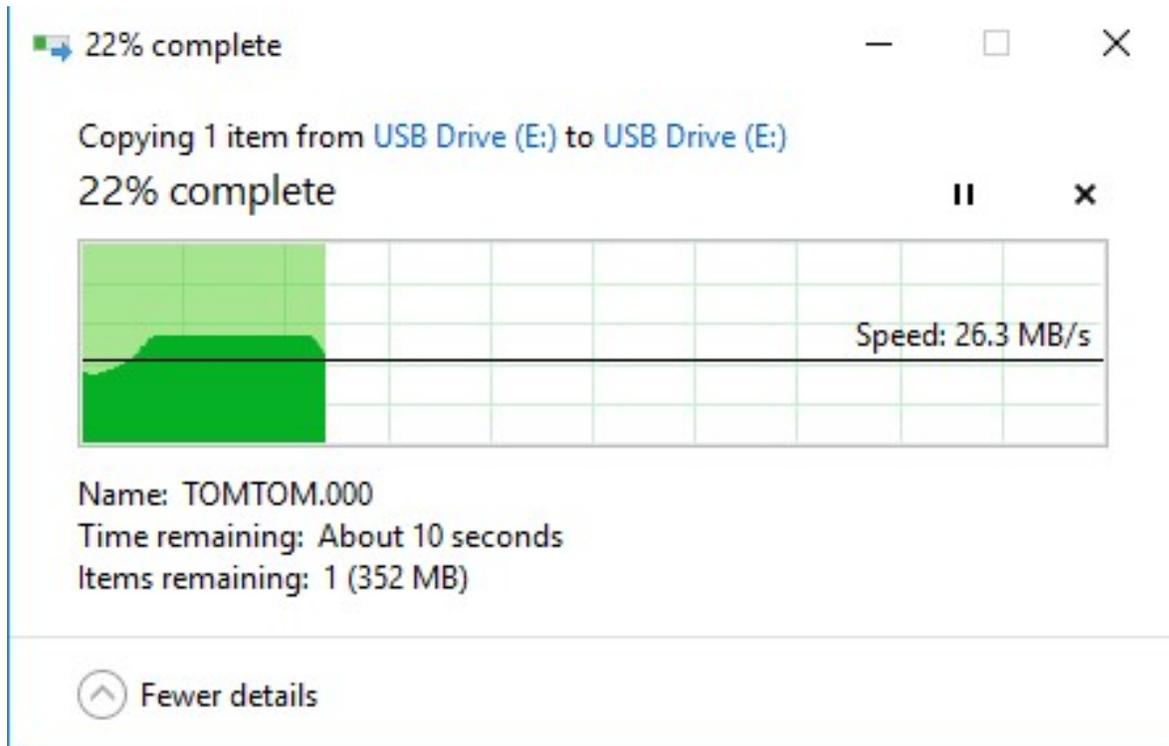

Copy the file TOMTOM.000 to the root of the USB stick.
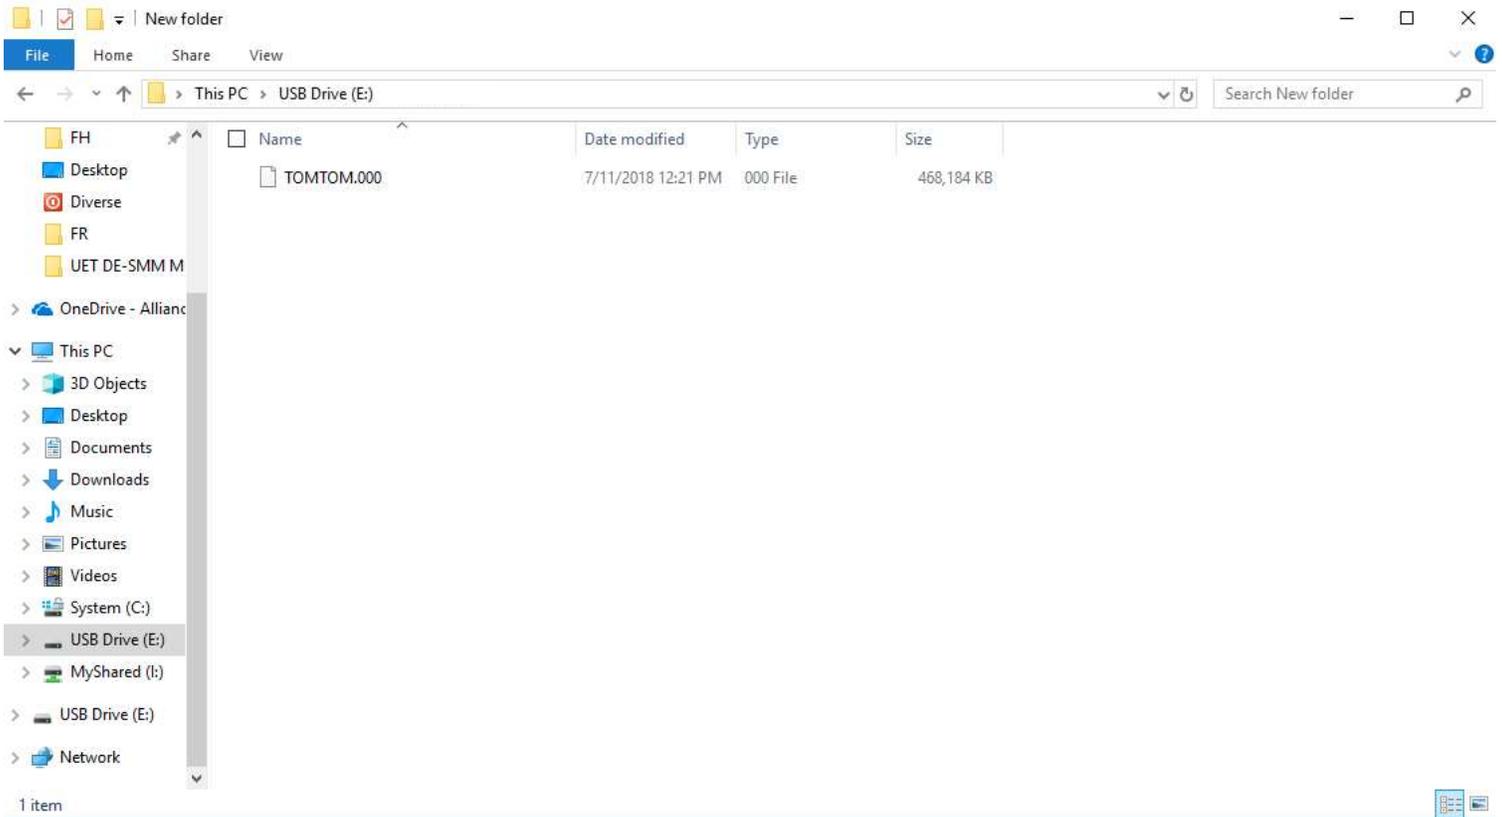

Start your engine and your R-LINK. Plug in your USB stick. Your R-LINK will automatically detect the update on your USB stick (please wait a few moments). Do not switch off the engine during the installation. The installation may take up to 20 minutes.

R-LINK checks the file automatically It will then display the series of screens shown below. You need to select "yes" on each screen before the installation can begin.

Then your R-LINK will display the progress of the download. All multimedia and driving assistance features will be unavailable during use. **Do not remove the USB stick.** To finish, an on-screen message will confirm that the installation is complete.

You may now unplug the USB stick.

The system will be operational as soon as GPS signal is found.
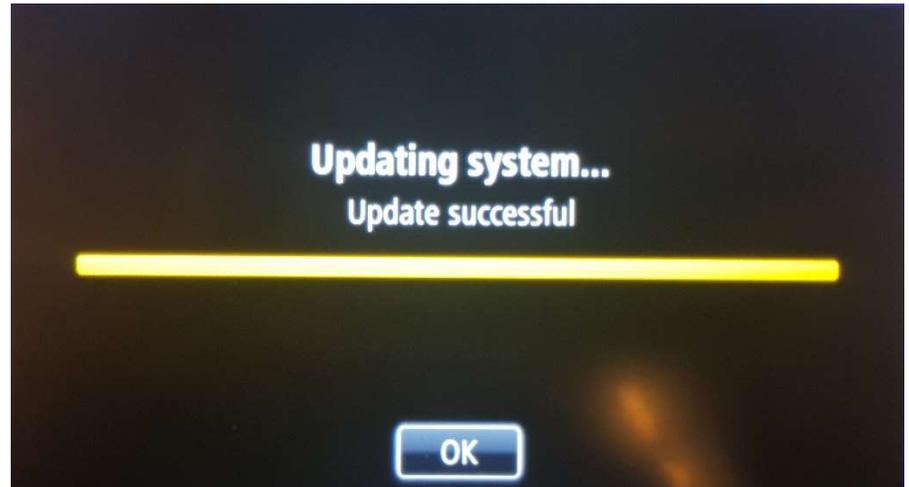

You can check whether the software update has been carried out successfully by going to Menu > System > Status and Information -> Version Information. Example screen. The version number is indicated at the time of the download.
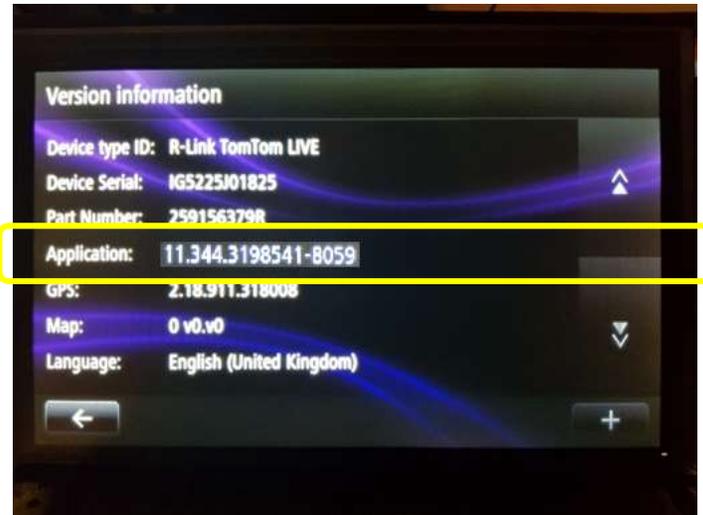

Don't forget to check that your R-LINK's connectivity is active in order to receive Traffic info in real time.
